EMS — Go-Live Guide

How CareerMap Solutions starts using the Employee Management System, step by step · 14 October 2026

EMS is at: https://ems.careermapsolutions.in — on a computer or a phone.

This guide takes you from the first sign-in to the first payroll. Each step says **who** does it: the **Super Admin**, **HR** or **Accounts**. Do the steps in order. Steps 1 to 5 take about half a day; most of it is typing in your own data.

What to keep ready

What	Who has it
The **administrator login** we give you (an email and a first password)	The Super Admin
The owner's work email, and the work emails of people with a role (HR, Accounts, managers)	The Super Admin
A list of all employees: name, Employee ID, joining date, department, designation, and an email for those who have one. For people already working here, also the date each was **confirmed** (after probation)	HR
How much leave each person has already taken this year, if you start in the middle of the year	HR
This year's holidays (Diwali, Holi, Eid and the state holidays move every year)	HR
A phone or laptop in the middle of the office hall, to record the office's location (for checking in from a phone)	The Super Admin
Everybody's salary, bank account (a cancelled cheque or passbook page), PAN and UAN	Accounts
The **backup passphrase** we give you. Keep it in a password manager. Never share it and never change it: without it, no backup can be opened, by anybody	The owner

Step 1 — Sign in, and change the first password Super Admin

1. Open **https://ems.careermapsolutions.in** and sign in with the administrator login.
2. Top right, your name → **My Profile** → **Password**. Choose a new password of at least 10 characters.

This administrator login belongs to no employee. Keep it safe, for emergencies. The owner gets a login of their own in step 3. A Super Admin's password cannot be reset from the app, so keep each Super Admin password in

a password manager.

Step 2 — The company's settings Super Admin

Everything is under **Settings** (left menu). Most settings already have sensible values: change only what is different for you.

Settings tab	What to fill in or check
Company	The company's legal name, address, phone and HR email.
Attendance Security	The **Attendance Method**: how check-in and check-out are proved, one of three. **Location** (inside the office, from a phone; chosen to start), **Selfie** (a live photo from the front camera, from anywhere), or **Location + Selfie** (for more than one site, such as your warehouses: the phone's current, precise location wherever the person is, then the photo; both are kept, and HR sees the place on a map; no office location is needed). **Precise Location**: the roughest place taken (100 metres to start); a phone set to Approximate (1 to 3 km) is always refused. For Location, save the **office location** first: stand in the middle of the office hall with a phone and press **Capture where I stand**, or type it in, and save. The **radius** is 15 to 20 metres (20 to start), and a phone's reading must be accurate to 20 metres or better. Walk to the corners of the hall and press **Test where I stand** to see where a punch is accepted. Then check the other settings: **One phone per employee** (off; when on, each person checks in only from their own phone), **Keep selfies for** (60 days), and **Confirm by the fingerprint machine** (on, 30 minutes allowed apart; a day not on the machine is flagged, or made absent if you choose). Tell your staff before you choose a method with a selfie. Last, **No check-in means absent** (off to start): from the day you choose, a working day that ends with no check-in, no leave and nobody's mark is recorded **Absent**, for everybody, and the person is told how to apply for leave or ask for a correction. Weekly offs and holidays never are, and a month whose payroll is approved never changes. Before you save, the page says how many days it will mark absent. Choose the day check-in started.
Organisation	Your **Departments**, **Designations** and **Shifts**. For each shift: its hours, the hours worked for a full day (8 to start) and a half day (4½ to start; less is absent), any unpaid break (none to start), and behind the sliders button the grace period and lateness rules.

Leave Config	The **Working Week**: which days are off, and from when — press **Change weekly offs** and choose today or the 1st of next month, and the days before keep the week they had. When you first set it up, choose the 1st of this month (while this month's payroll is open), so the whole month follows it. The **Leave Types** and their rules, and the **Holidays**: enter the festivals for this year and the next — Republic Day, Independence Day and Gandhi Jayanti are added by themselves each year, and in December you are reminded if next year's festivals are missing. A holiday not entered is a working day. For each leave type: days a year, paid or unpaid, carry forward, and behind the sliders button what a new joiner gets and when it can be used (from the first day, after some days, or after confirmation). **Loss of Pay** is there to start: unpaid, with no limit. The **Year-end Reminder** sets how many days before the leave year ends people are told of leave they would lose (30 to start). HR can do the leave types, the reminder and the holidays too; the working week is the Super Admin's.
Payroll Config	PF, ESI, professional tax, the pay day, loss of pay, overtime and income tax. Leave them as they are unless your accountant says otherwise. Overtime pay starts off.
Employee Lifecycle	The probation length (6 months to start) and the notice period (30 days to start).
Documents	Which documents to collect from each employee, and the largest file size (2 MB to start).
Approvals	Who decides each kind of request (the reporting manager or HR), who decides for people with nobody above them, and who stands in for a manager.
Users & Roles → Passwords	Who sets passwords. To start: HR sets employees' passwords and the Super Admin sets those of people with a role. Nobody can change their own, except the Super Admin.
Notifications	Which notices are sent. Every notice appears in the app's bell.

Step 3 — The owner Super Admin

1. **Employees → Add Employee**: the owner's details, with their real post as the designation: **Director** is in the list, and Founder or CEO can be added first in **Settings → Organisation → Designations**. Lists show a person's department and post; their login's role (Super Admin) is shown only where logins are managed. Leave "Give them a login" unticked here.
2. Open the owner's page → **Logins → Add login**. Role: **Super Admin**; the owner's own work email; **Add login**.
3. EMS shows a **one-time link**. Copy it and send it to the owner. They open it and choose their own password. A Super Admin's password is always their own.
4. Once they have chosen it: **Settings → Company Tree → Make owner** next to the owner's name.

From now on the owner signs in with their own login. Their own leave and requests are recorded directly, with nobody's approval.

Step 4 — People with a role: HR, Accounts, managers Super Admin

For each of them, **Employees → Add Employee**:

1. Fill in their details and their **Reporting Manager**. For somebody already working here, also **Confirmed On**: the date their probation ended. Left empty, EMS treats them as a new joiner, in onboarding and then on probation.
2. Tick **Give them a login to the system**. Choose their **Role**, type their **work email**, and type a **password** twice.
3. **Add Employee**. The login works at once. Tell the person their password yourself; it is not shown again.

Somebody with a role also needs an **employee login** for their own attendance, leave and payslips: their page → **Logins** → **Add another login** → Role **Employee**. The email is optional. Without one, they sign in with their Employee ID.

Step 5 — Everybody else HR

Many at once, from a spreadsheet:

1. **Employees → Import → Download a template**. Fill it in: one row per employee. For people already working here, fill in **confirmed_on** too (the date their probation ended); left empty, they start as new joiners.
2. Upload it. EMS checks every row first and names any problem with its line number. Nothing is saved until every row is right.
3. **Import**. Employees with an email get a login that waits for its password ("No password yet"). Those without an email get no login yet: give one on their page → **Logins** → **Add login**, Role **Employee**, no email needed, and a password.

One at a time: **Employees → Add Employee**, tick **Give them a login**, keep the role **Employee**, and type a password twice. The email is optional. For somebody already working here, fill in **Confirmed On**.

Passwords: for each login that waits, **Settings → Users & Roles** → the key button next to "No password yet". You can also open the person's page → **Logins** → **Set password**. Tell each person:

> Sign in at **https://ems.careermapsolutions.in** with your **Employee ID** (capital or small letters both work) or your email, and the password HR gave you. If you forget it, ask HR for a new one.

Who reports to whom Super Admin: **Settings → Company Tree** → place each person under their manager. Leave and requests go to that person.

Step 6 — Before the first payroll

Who	What

HR	**Leave → Team Balances**: check that everybody has this year's leave. Each person added with a joining date gets their share at once, and each new leave year arrives by itself. Anybody added without a joining date is named there: set it on their page, or press **Grant leave** to give them the full year. Anybody with their own number of days (15 days of Casual Leave instead of 12): their page → **Leave → Change**. Starting in the middle of the year? EMS does not know the leave people took before it: on **Team Balances**, **Correct** each person's balance (whole or half days, with a reason they see).
HR	PAN, UAN, PF and ESIC numbers: each person's page → **Edit → Statutory Details**.
Accounts	**Payroll → Salary structure → Set salary** for each person: the start date, the yearly CTC and the monthly components.
Accounts	**Payroll → Bank accounts**: add each salary account from a cancelled cheque or passbook page, then check it. Salary is paid only into checked accounts. Employees can also send in their own from **My Profile**.
Everybody	Attendance: **Check In** and **Check Out** on Home, the way the attendance method says: inside the office from a phone, with a live photo, or their current location with a live photo. The first time, the phone asks to allow location and the camera: choose **Allow**. The phone reads its location for a few seconds. With Location, a punch outside the office is refused. With Location + Selfie the location comes first, wherever the person is: without it the camera does not open, and nothing is punched. When the phone asks, choose **Precise** (not Approximate) and **Allow while visiting the site**: an approximate place is refused, at check-in and at check-out, and the page says how to turn precise location on. If you use a fingerprint machine, HR imports its file (**Attendance → Import**): it confirms each day the app recorded. For a night shift, start the file on the day before, so each night is whole. If the machine knows a person by a number that is not their Employee ID, enter that number as their **Machine ID**: their page → **Edit**.

Step 7 — The first payroll, at month end

Accounts · Super Admin

1. **Accounts:** **Payroll → Payroll runs** → the month → **Run payroll**. This makes a draft: check the payslips. After any correction, press **Recalculate**.
2. **Super Admin:** the same month → **Approve**. Accounts prepares the payroll; only the Super Admin approves it.
3. **Accounts:** **Bank file → Download CSV**, and upload it to the bank.
4. **Accounts:** once the bank has paid, **Mark as paid**. Everybody then sees their payslip under **Payslips**, as a PDF.

Until a month is marked as paid, and before the lock day set in Payroll Config, the Super Admin can reopen it to correct a mistake. Once it is paid, it cannot be changed.

Every day after that

- **Employees** check in and out on Home, apply for leave, and send requests (attendance corrections, work from home, overtime) from **Requests**.
- **Managers** approve or reject from **Waiting for you** on Home.
- **HR** sees the whole company's attendance and leave, and sets passwords when somebody forgets theirs.
- **HR** on **Attendance**: **No Out** lists the days somebody checked in and never out — the day stays present, and the person is told; put the check-out in from their day. To mark several people at once (the app was down, the office was shut), tick them and press **Mark the ticked…**: only those ticked are marked, with the reason you give.
- **HR** looks at **Attendance** → **Suspicious**: punches refused or worth a second look, and days not on the fingerprint machine. When **One phone per employee** is on, a punch from another phone is refused and the person is told to contact HR. HR or Admin opens the person's page and goes to **Punch phone** (on the Login tab): **Replace** makes the new phone theirs and stops the old one at the same time; **Reset** stops their phone, and the next new phone they check in from becomes theirs.
- **Backups** are taken by themselves every night, and checked every month. The Super Admin can see them in **Settings** → **Audit Log** → **System jobs**.

Need help? Forgotten passwords: employees ask HR; people with a role ask the Super Admin. For anything else, or anything that looks wrong, contact us. Tell us the page, what you clicked, and what you saw — a screenshot helps.
